Medical Mycology

Description

Morphologic characteristics are fundamental in the identification of filamentous fungi. Because many clinical laboratories do not culture large numbers of these organisms, technologists seldom gain familiarity with more than a few species.

This wet workshop allows students to make and examine preparations of the major groups of molds, emphasizing the more commonly encountered species.

Objectives

At the conclusion of this program, the participants will be able to

- discuss the major groups of filamentous fungi.
- prepare and examine tease mounts of fungi.
- recognize significant identifying characteristics of many common molds.
- discuss successful preservation and safe handling of filamentous fungi.

Audience

This intermediate-level wet workshop is intended for persons having limited experience in the identification of medically important filamentous fungi. This workshop will be of interest to public health microbiologists and clinical laboratory scientists.
